

Recommendations

- A bond under the provisions of Prop 39 is feasible but information about the way in which bond funds will be used does not achieve the required 55% majority.
- To achieve the required 55% majority the cost of the bond will need to be kept at or below \$9 per \$100,000 of assessed value.
- Like many community colleges, the district is not well known to many local voters. Those who can evaluate the district, however, give the district high marks.
- Any proposal placed on the ballot must be supported by a well targeted information campaign that will maximize the support available from Democrats, less frequent voters and in student households.
